

Active Silicon LFG VDig v1.6beta2

Note: Version 1.6 Beta Release 2

This software contains a beta version of the LFG VDig driver.
It contains a Universal Kernel Extension and QuickTime component.

Known Issues:

1) Intel based Macs open LFG devices in the reverse order to PowerPC based Macs,
i.e.

On a PowerPC based Mac:

lfgvdigx -1 is channel A

lfgvdigx -2 is channel B

lfgvdigx -3 is channel C

lfgvdigx -4 is channel D

On an Intel based Mac:

lfgvdigx -1 is channel D

lfgvdigx -2 is channel C

lfgvdigx -3 is channel B

lfgvdigx -4 is channel A

Installation:

CDA Driver

Quicktime VDig

Supported Apple hardware:

Any PowerPC based PCI platform

Any PowerPC based PCI-Express platform

Any Xeon based PCI-Express platform

e.g. G3, G4, G5, Xserve, Mac Pro

Supported Apple Operating System:

MacOS X v10.3 and above

Supported cards:

Active Silicon LFG series video capture
